Unergative vP, transitive VoiceP: two types of external argument

Rebecca Tollan
University of Toronto
becky.tollan@mail.utoronto.ca

Context

- Recent work: verbalizing *v* distinct from external argument- introducing **Voice** (Pylkkänen 2008; Harley 2013; Legate 2014).
 - *Opportunity to reassess transitive-unergative relationship.*
- If unergatives are **concealed transitives** (Hale & Keyser 1993), then unergative subjects should originate in **VoiceP**, like [_{VP} V [_N dance]] transitive subjects.
- Massam 2009 argues that this is not the case in Niuean:
 - ***VoiceP** introduces **transitive Agent***
 - ***vP** introduces **unergative “Doer”***
- **TODAY: Unergatives contain less phrasal structure than full transitives.**
 - **Transitivized unergatives** do not exhibit the morphosyntactic features associated with full **transitives** (even though they are now overtly transitive).

Plan

1. Split v-Voice structure.
2. Cross-Linguistic evidence
 1. *Algonquian theme sign morphology*
 2. *Samoan ergative case.*
3. Unified analysis of Algonquian and Samoan
 - *Pseudo-transitives*
 - *Roles of v and Voice*
 - *Causatives*
4. The typological space
5. Conclusion

Unergatives in the verbal projection

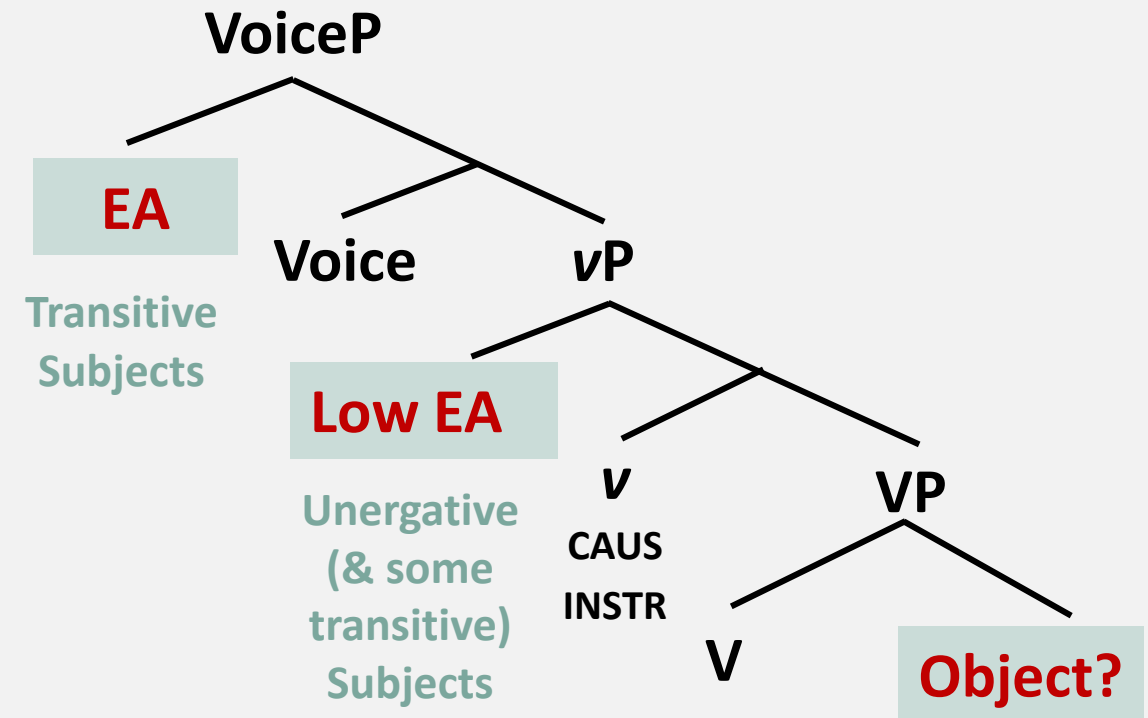

Split VP

(Chomsky 1995, Kratzer 1996, Marantz 1997, a.o.)

Split VP + Split v/Voice

Pylkkänen 2008, Harley 2013, Legate 2014, a.o.

1. Algonquian

v and Voice are both realized overtly...

- Minimal verb stem: acategorical root + verbalizing “**final**”
(light verb meaning, derivational, determines transitivity of stem)

- Finals are widely analyzed as **v**:
 - Bruening 2001:122
 - Brittain 2003
 - Hirose 2003
 - Branigan et al. 2005
 - Piggott & Newell 2006
 - Mathieu 2007
 - Slavin 2012
 - etc.

Stems with intransitive finals	Stems with transitive finals
<i>miyo-si-</i> good- be 'to be good'	<i>miyo-h-</i> good- cause 'to make x good'
<i>miyo-payi-</i> good- go 'to go well'	<i>miyo-n-</i> good- hold 'to hold x well'

Plains Cree (Wolfart 1973)

Voice = theme sign

- The stem is followed by an inflectional “theme sign”:

nimiyonāw ‘I hold it well’

ni-	miyo	-n	-ā	-w
1-	good	-do.by.hand	-3OBJ	-3

= T agreement (always present)

Final = v

- derivational
- present on all verbs
- differs for trans / intrans
- light verb meaning

Theme sign = Voice

- inflectional
 - present on some (mostly transitive) verbs
 - Φ -agrees with object
 - absent in unaccusatives
 - ‘inverse -*ikw*, impersonal “passive” -*ikawi*
- Head that introduces EA and licenses IA:
Voice (Bruening 2005; Bejar & Rezac 2009; Oxford 2017, a.o.)

Unergatives lack a theme sign

- If unergative subjects are introduced in Voice, as in full-fledged transitives, then we should see a **theme sign**.
 - Possibly a **default theme sign**: **-am INAN.OBJ** or **-ekw INV**
- But in fact, no theme sign appears on an unergative:

Transitive

[miyo-n]-**am**-w
good-hold **-IN.OBJ** -3
'she holds it well'

Unergative

[ni:m-i] (***-am**) -w
dance-**do**(**-IN.OBJ**) -3
'she dances'

- **Conclusion**: no theme sign, no VoiceP
- **Alternative conclusion**: VoiceP is present, but Voice appears in a **null** default form because there's no object to agree with?

Transitivized unergatives

- We can test the alternative by adding an object:

Unerg + cognate obj

[niim-i]-w niimiwin-**ini**
dance-**do** -3 dance.NOM-**OBV**
'She's dancing a dance'

Unerg + hyponymous object

[niim-i]-w Maahkaniina-niimiwin-**ini**
dance-**do** -3 Macarena-dance.NOM -**OBV**
'She's dancing the Macarena'

Tollan & Oxford 2017

- No theme sign even with a viable target for object agreement
 - **Obviation** on the (obligatorily 3rd-person) object indicates that it is a referential argument, not an incorporated nominal.
- **Conclusion:** the absence of a theme sign is **not** because of the lack of an object to agree with. **Better analysis: no VoiceP.**

2. Samoan

Samoan (Polynesian)

- VSO, ergative-absolutive alignment, dependent marking (data from Tollan *to appear*).

Transitive

Sa: *fau [e le tama:loa] [le fale]*
PAST build ERG DET man DET house.ABS
'The man built the house'

Unergative

Sa: *siva [le teine]*
PAST dance DET girl.ABS
'The girl danced'

Unergative + object

Sa: *siva [le teine] [i le siva / uosi]*
PAST dance DET girl.ABS ACC DET dance / waltz
'The girl danced a dance/waltz'

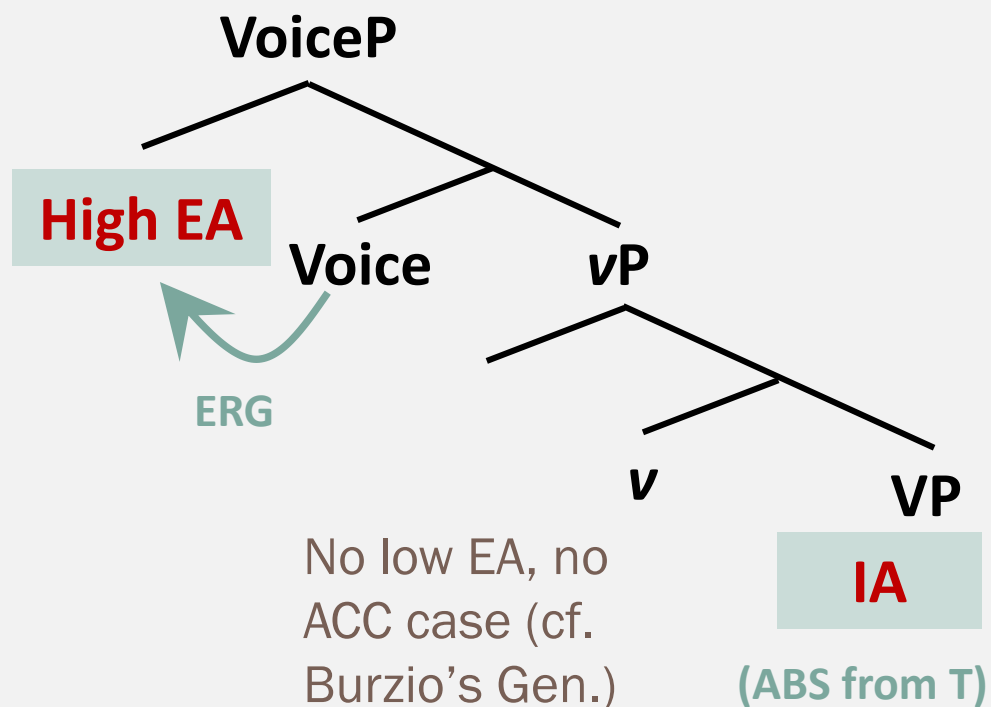

Unaccusative

Sa: *asulu [le teine]*
PAST fall DET girl.ABS
'The girl fell'

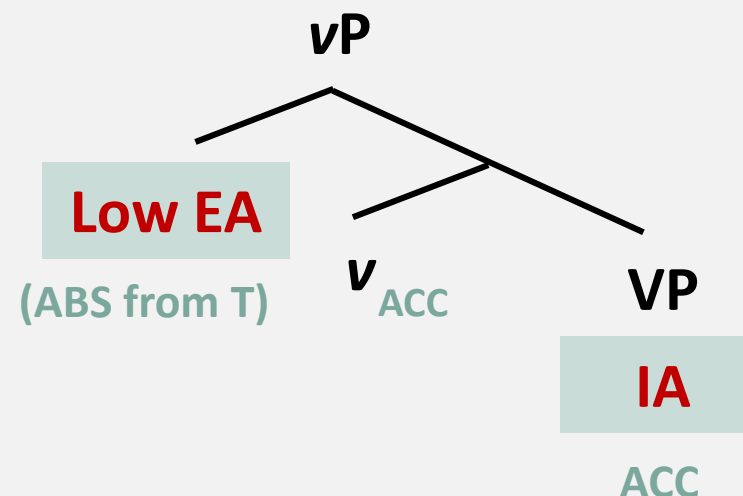

- Unergative object behaves as direct object; *i*-case behaves as structural, not lexical case (Tollan *to appear*).
- Samoan ERG case ~ Algonquian Theme sign = VoiceP

Transitives in Samoan

- ERG-ABS 'full' transitive

- ABS-ACC 'semi' transitive – transitivized unergative
- No **VoiceP** (and therefore, no ERG case)

Unifying Algonquian and Samoan

Summary

- Unergatives in Algonquian and Samoan lack morphosyntactic ('Voice') features of full transitives:

Algonquian: Theme sign = Voice

nimiyonāw

Transitive

miyo -n  -w
good -do.by.hand  -3
'She holds it well'

niimiw niimiwinini

Unergative

niim -i  -w niimiwinini
dance -do  -3 dance.obv
'She's dancing a dance'

Samoan: ERG = (assigned by) Voice

Sā fau e le tamāloa le fale

Sa: fau  le tama:loa le fale
PAST build  DET man DET house.ABS
'The man built the house'

Sā siva le tamāloa i le siva

Sa: siva  le tama:loa i le siva
PAST dance  DET man.ABS ACC DET dance
'The man danced a dance'

- Unergative subjects introduced by v, not by Voice (see Massam 2009).

Pseudo-transitives

- Algonquian and Samoan both have a class of ‘pseudo-transitive’ (Polynesian: ‘middle’) verbs.
 - *Canonically transitive, but do not have Voice (theme sign/ERG) morphology.*
 - *Identical to unergative + object constructions.*

Algonquian

wanikiskisiw

wanikik -isi (*a) -w
forget -be (*3OBJ) -3
‘She forgets it’

e.g., ‘remember’, ‘rely on’,
‘buy’, ‘sell’, ‘look at’, ‘wear’,
‘release’ (Dahlstrom 2013)

Samoan

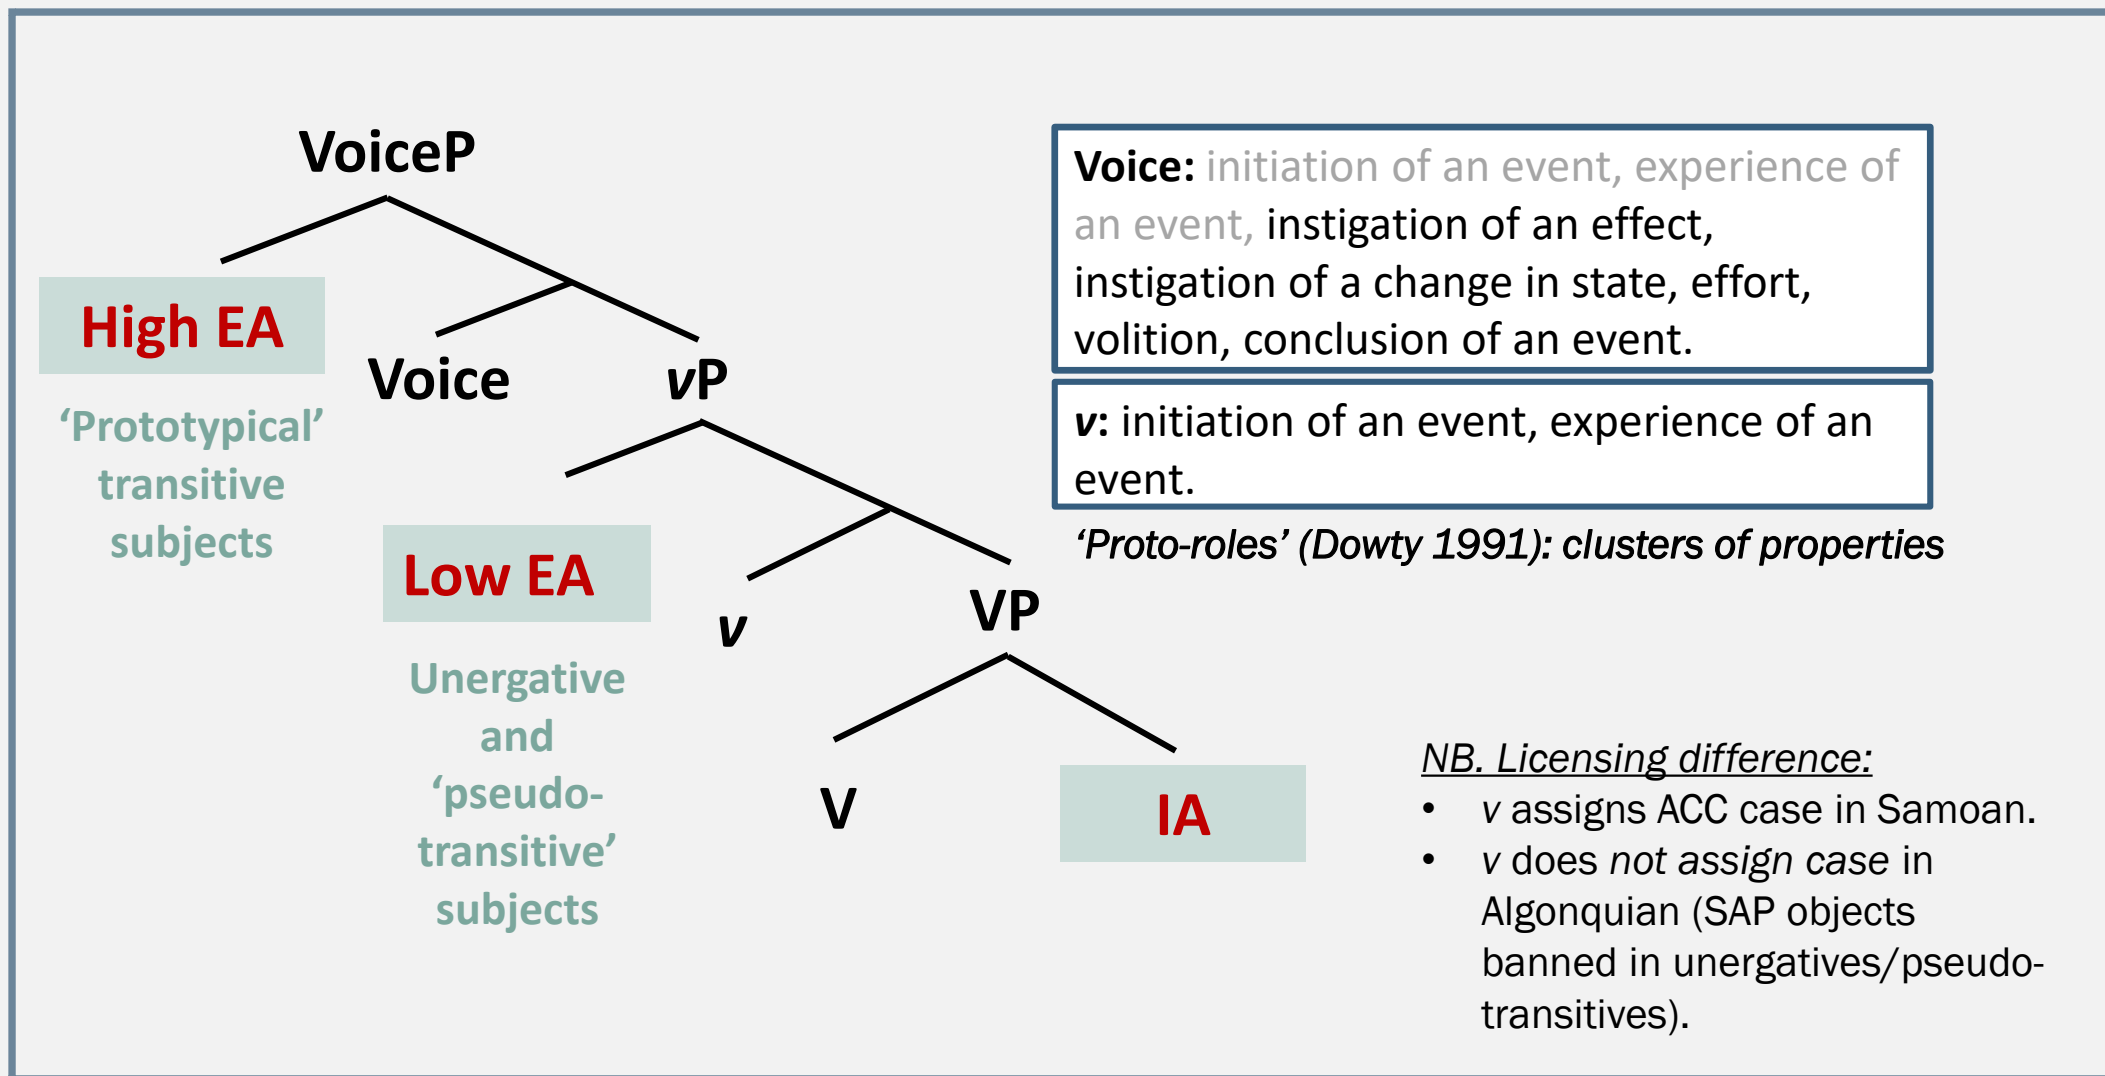

Na galo le teine i le keke

Na galo (*e) le teine *(i) le masi
PAST forget (*ERG) DET girl.ABS *(ACC) DET cookie
‘The girl forgets the cookie’

e.g., ‘follow’, ‘hear’, ‘enjoy’, ,
‘look at’, ‘ask’, ‘scold’ (Mosel &
Hovdhaugen 1992)

- *Agent is less agentive, object is less affected (cf. Dahlstrom 2013, Mosel & Hovdhaugen 1992, a.o).*

Two types of external argument

Causatives

- Further evidence that full transitives are more structurally complex: monoclausal causativization of pseudo-transitives/unergatives is possible....

Algonquian

nīm-i-
dance-do
'to dance'

nīm-i-**h**-
dance-do-**CAUS**
'to make x dance'

Samoan

Sā siva le teine i le uosi
PAST dance DET girl.ABS ACC DET waltz
'The girl danced a waltz'

Sā **fa'a**siva **e** loana le teine i le uosi
PAST **CAUS**.dance **ERG** loana DET girl.ABS ACC DET waltz
'loana made the girl dance a waltz'

Causativization = adding VoiceP.

.....but full transitives cannot be causativized in the same way.

Causative **-h** is not added to transitive stems (Bloomfield 1946); biclausal structure is needed.

Causative **fa'a** is not added to ergative verbs (Mosel & Hovdhaugen 1992; Tollan *to appear*); biclausal structure is needed.

VoiceP is already present: no further thematic structure can be added.

Implications

The typological space

- Not necessarily the case that unergatives lack VoiceP in *all* languages.
- Several possibilities:
 - *Some languages lack unergative verbs altogether*
 - **Mayan** (Coon 2013): light verb + NP construction.
 - *Some languages may bundle vP and VoiceP as a single projection, in which case transitive and unergative subjects would pattern together.*
 - **Basque** (western dialects): ERG case on unergative subjects.
 - *Some languages may exhibit a v/Voice split in which all external arguments are introduced by Voice*
 - **Acehnese** (Legate 2014): v does not introduce an EA.
 - *Cross-linguistic differences in licensing capacities of v/Voice may constrain outputs for transitive configurations.*
 - **Niuean** (Tollan 2015): no ACC case on v; all DPs require licensing → ERG-ABS as a ‘last resort’ strategy for objects of unergatives.

The nature of ergative case

- Inherent vs dependent case (Baker & Bobaljik 2017)
 - ***Inherent:** assigned hand-in-hand with theta role (e.g., by Voice)*
 - ***Dependent:** assigned configurationally, to the higher of 2 non-oblique DPs in a specified domain.*
- Baker and Bobaljik: non-ergative unergatives pose a problem for inherent approaches – if ERG is inherent, then both unergative and transitive subjects should bear ERG case, if they are merged in the same VP-external specifier.
- But – if unergative subjects are merged lower than (some) transitive subjects, then this difference is not surprising (Tollan *to appear*).
 - *ERG case assigned inherently by Voice, and associated with more (semantically) marked features of high agents.*

Conclusions

- In Algonquian and Samoan, unergative predicates are structurally less complex than full transitives (see Massam 2009, Tollan 2015, Polinsky 2016).
 - Unergative (and pseudo-transitive): [vP [VP]]
 - External argument in Spec of vP
 - Full transitive: [VoiceP [vP [VP]]]
 - External argument in Spec of VoiceP
- v introduces most basic properties of agents (initiation/experience of event)
- Voice encompasses more marked properties of agents (e.g., high effort, volition, instigation of an affect/change in state).
 - Morphosyntactically realized as theme sign (Algonquian), via ERG case marking (Samoan).
 - Transitivity of an unergative does not restore this morphology → the presence/absence of an object is not the only factor at play.

Eskerrik asko!
¡Gracias!
Thank you!

With special thanks to Kuinivia Seiloa, Efi Leniu, and Samson Beardy for their generosity as language consultants, and to Will Oxford, Diane Massam, audiences at the University of Toronto syntax group, NELS 46, WSCLA 22, WCCFL 35, CLA 2017, and many reviewers for helpful feedback and discussion.
